

M3 Use Case Diagram - Changes Required

给队友的简短修改清单。Database use cases 可以保留。

No.	要做的更改	Use case / relationship
1	补上 Withdrawn flow。M3 收到 withdrawal 后，要关闭 review/control、撤下 public control，并保留 audit records。	Process Withdrawn Application <<include>> Close Pending Reviews / Close Event-Control Activities / Unpublish Event-Control Information / Retain Records for Audit
2	区分 initial approval 和 final approval。	Approve Application for Authority Review; Grant Final Approval
3	Manual Review 改名并写明只在 Manual Review Required 时执行，同时记录 assessment。	Complete and Record Manual Assessment <<extend>> Initial Review [Manual Review Required]
4	Officer assignment 补 checklist 和根据 venue state default-check。	Assign Authority Officers <<include>> Display Officer Checklist; <<include>> Default-Check Officers by Venue State
5	Officer review 补 AI score confirm/override。这个和 resource override 不一样。	Review Assigned Application <<include>> Confirm or Override AI-Proposed Scores; record reason when overridden
6	Officer approve 前补 confirm all listed materials。	Approve Assigned Application <<include>> Confirm Review of All Listed Materials
7	MiniMax 生成的 list 不是 final，改成 proposed；同时显示 Stage 1 和 Stage 2 requirements。	Generate Proposed Event Control List <<include>> Display Stage 1 and Stage 2 Documentation Requirements
8	Stage 1 用 Verify，不用 Approve；reject 后要求 resubmit。	Verify Stage 1 Documentation; Reject Stage 1 Documentation <<include>> Require Documentation Resubmission
9	Rejected organiser notification 写清楚 result、reason 和 suggestion。	Notify Event Organiser of Rejection; Receive Rejection Result, Reason and Suggestion

Stage 2 flow - 必须重新连接

Public viewer confirm/report 时不要直接 Update Document State。正确连接如下：

Public confirmation	Confirm Published Stage 2 Image as Accurate <<include>> Increase and Display Confirmation Count
Public report	Report Published Stage 2 Image as Inaccurate <<include>> Direct Report to Incident Reporting Module
M4 returns outcome	Receive Event-Control Incident Outcome <<extend>> Require Documentation Resubmission [Confirmed True] <<extend>> Restore Documentation to Approved [Dismissed as False]
Database update	Only the two resolved outcome branches include Update Document State in Database.

可以保留

- Approve/Reject extend Initial Review 和 Second Review。
- Attach Authority Officer Feedback 作为 optional extension。
- Edit/Publish/Upload/Stage 1 review 对应的 database use cases。
- Publish Event Control Document include Sanitise Event Control Document。
- Override Resource Recommendation include Record Override Details and Reason。
- Use Previous 作为 Upload Event Control Document 的 optional extension。
- MiniMax M3 API 连接 proposed event-control generation。
- View Application Result and Feedback。

完成以上修改后，这张图就可以作为 final M3 use case diagram。
