

M5 Use Case Diagram - Changes Required

给队友的简短修改清单。Database/read-only use cases 可以保留。

No.	要做的更改	Use case / relationship
1	Authentication relationship 方向改正。应该是进入 M5 时必须 authenticate，不是 authentication include access report。	Access Analytics and Reporting Module <<include>> Authenticate as Admin; Admin -> Access Analytics and Reporting Module
2	增加 Generate Selected Report 作为主要 use case。Select Report Type 和 scope 都是生成 report 的必要步骤。	Generate Selected Report <<include>> Select Report Type; <<include>> Select Analysis Scope
3	补 Overall / By Event Type analysis scope。Select Event Type 只在 By Event Type 时发生。	Select Event Type <<extend>> Select Analysis Scope [By Event Type]
4	删除 Select Report Type include Select Event Type，以及五个 report extend Select Event Type 的所有线。	Each specific report <<extend>> Generate Selected Report [selected report type]
5	五个 report 到 View Generated Report 不要用普通 solid line。View 是生成后的独立/后续 use case。	Admin -> View Generated Report; View Generated Report <<include>> Display Summary Values, Tables and Charts
6	补 latest valid records、privacy filtering、Data Not Available 和 read-only source access。	Generate Selected Report <<include>> Retrieve Latest Valid Records / Apply Privacy Filtering / Handle Unavailable Data; Read Source Records Only
7	Export 仍可 optional extend View，但 stereotype 要写 <<extend>>，不是 <<extended>>；并补 PDF/CSV 与 export metadata。	Export Generated Report <<extend>> View Generated Report; <<include>> Select PDF or CSV; <<include>> Add Report Metadata and Privacy Filtering
8	改 report 名称和所有 UML stereotype 拼写。	Safety Resource and Override Analysis Report; use <<extend>>, not <<extended>>

正确的 report generation structure

最主要就是把 Select Event Type 从所有 report 中间拿掉，改成下面这个结构：

Access	Admin -> Access Analytics and Reporting Module <<include>> Authenticate as Admin
Generate	Admin -> Generate Selected Report <<include>> Select Report Type <<include>> Select Analysis Scope
Scope	Select Event Type <<extend>> Select Analysis Scope [By Event Type]
Report type	Each of the five specific report use cases <<extend>> Generate Selected Report [matching selected type]
Generate safely	Generate Selected Report <<include>> Retrieve Latest Valid Records / Apply Privacy Filtering / Handle Unavailable Data
View / export	Admin -> View Generated Report Export Generated Report <<extend>> View Generated Report

可以保留

- Admin 作为唯一 actor。
- Select Report Type。
- 五个 confirmed report type use cases。
- View Generated Report。
- Export Generated Report 作为 optional extension。
- Authentication use case；只需改名为 Authenticate as Admin 和修正 include 方向。
- Database/read-only use cases 可以加入并保留，因为 M5 只读取 source modules。

五个 report 名称

- Event Risk and Incident Analysis Report
- Application Outcome and Rejection Analysis Report
- Risk Assessment Analysis Report
- Safety Resource and Override Analysis Report
- Event Control Compliance Analysis Report

完成以上修改后，这张图就可以作为 final M5 use case diagram。
