

# STERAS M1–M5 in 8 minutes

Malaysia Tourism Storytelling Showcase 2026 · Application  
iTpN6WjUEKtgQFWElIE1

| Time | Screen                | One sentence to say                                                                                           |
|------|-----------------------|---------------------------------------------------------------------------------------------------------------|
| 0:00 | Organizer application | M1 turns two completed forms and supporting evidence into one reviewed, immutable application version.        |
| 1:30 | Official assessment   | M2 combines live context, MiniMax proposals, deterministic validation and four append-only authority reviews. |
| 3:15 | Official resources    | Seven planning quantities are reproducible and clearly labelled as internal prototype guidance.               |
| 4:15 | Admin application     | M3 keeps officer recommendations separate from the Admin second-review decision and publication boundary.     |
| 5:30 | Event controls        | Four authority controls connect verified plans to sanitized public on-site evidence.                          |
| 6:30 | Incident              | M4 converts a public discrepancy into an assessed, assigned, responded-to and resolved record.                |
| 7:30 | Reports               | M5 reads the latest valid records into privacy-safe analytics with explicit source coverage.                  |

## Numbers worth remembering

| Application                | Risk                      | Review        | Controls                      | Analytics         |
|----------------------------|---------------------------|---------------|-------------------------------|-------------------|
| 12 fields · 18/18 evidence | 28 · Medium · 7 resources | 4 authorities | 13 Stage 1 · 3 public Stage 2 | Complete coverage |

## Safe phrasing

- Say “AI-assisted proposal”, not “AI approval”.
- Say “official risk result”, not “authority-validated resource ratios”.
- Say “real production flow with fictitious demonstration data”, not “real government permit”.
- If live navigation is slow, use the presentation pack screenshots and keep the same application ID visible.

## Production URL
