

M4 Use Case Diagram - Changes Required

给队友的简短修改清单。Database use cases 可以保留。

No.	要做的更改	Use case / relationship
1	Submission 补 eligibility、required details , 以及 event/reporter linkage ; 如果从 public control report 进入 , 还要保留 Event Control reference。	Submit Incident Report <<include>> Validate Event Eligibility and Mandatory Fields; Associate Report with Event and Reporter; Retain Event Control Reference [when applicable]
2	AI assessment 完成后通知 assigned organiser , 并显示 immediate-action status。	Perform AI Incident Assessment <<include>> Store AI Assessment Result; <<include>> Notify Assigned Event Organiser
3	Review Incident Report 要明确显示 AI result、severity、event info、evidence 和 linked Event Control。	Review Incident Report <<include>> Display Incident and Assessment Information
4	Internal response 补 assign team、record actions、upload evidence 和 update handling status。	Manage Internal Incident Response <<include>> Assign Internal Response Team / Record Response Actions and Evidence / Update Incident Handling Status
5	External assistance 不只推荐 contact ; organiser 还要 select authority、record engagement , 并 refer for investigation。	Request External Assistance <<include>> Recommend Authorities; Select Recommended Authority; Record Authority Engagement; Refer Incident for Investigation
6	Authority actor 改成 Assigned Authority Officer , 并补 investigation actions、evidence、findings 和 outcome。	Assigned Authority Officer -> Investigate Referred Incident <<include>> Record Investigation Details and Outcome
7	Resolve and Close 前要 review internal/authority outcome , 并记录 final resolution。	Resolve and Close Incident <<include>> Review Response or Investigation Outcome; <<include>> Record Final Resolution
8	Track Incident Status 改成完整 progress , 包括 response、authority investigation 和 final resolution。	Track Incident Progress and Final Resolution
9	补完整 incident history 和 authority directory ; 这些可以继续画成 database use cases。	Maintain Complete Incident History; Maintain / Retrieve Authority Directory

Event Control discrepancy flow - 必须补完整

现在 Record Event Control Discrepancy Outcome extend Resolve and Close Incident 是对的，但还缺 M3 reference 和 outcome notification。正确连接如下：

Report origin	Submit Incident Report <<include>> Retain Event Control Item, Published Evidence, Event and Originating Action [Event Control report]
Final resolution	Record Event Control Discrepancy Outcome <<extend>> Resolve and Close Incident [linked Event Control incident] Outcome: Confirmed True or Dismissed as False
Notify M3	Resolve Event Control-Related Incident <<include>> Notify Authority Approval Module that Outcome Is Available
Audit record	Store investigation result, evidence, response actions, discrepancy outcome and final resolution in the incident history.

可以保留

- Reporter -> Submit Incident Report 和 Track Incident Status。
- Submit -> Validate -> Store -> Perform AI Assessment 的主流程。
- Perform AI Assessment include Store AI Assessment Result。
- Review Incident Report include Display Relevant Information；只需改名得更明确。
- Manage Internal Response include validation/update database use cases。
- Request External Assistance include AI authority recommendation 和 contact display。
- Record Event Control Discrepancy Outcome extend Resolve and Close Incident。
- Send Feedback to Reporter 可以保留，但不是 final FR 的必需 use case。

Actor / naming cleanup

- Organizer -> Event Organiser
- Authority -> Assigned Authority Officer
- MiniMax M3：如果 team 没有确认 M4 一定使用 MiniMax，建议改成 AI Service；final FR 只写 AI-assisted。
- 增加 external actor: Authority Approval and Notification Module，用于接收 Event Control incident outcome。

完成以上修改后，这张图就可以作为 final M4 use case diagram。
